

# Instruction Learning with Large Language Models

Xubin Ren, Yiming Zhang  
2023/09/29

# Logistics

- Background and Motivation
- Paper presentation:
  - *Multitask Prompted Training Enables Zero-Shot Task Generalization*
  - *SELF-INSTRUCT: Aligning Language Models with Self-Generated Instructions*
  - *How Far Can Camels Go? Exploring the State of Instruction Tuning on Open Resources*
  - *One Embedder, Any Task: Instruction-Finetuned Text Embeddings*
- Discussion

# ChatGPT is a real generalist.

brain storming

explain complex concepts

coding design

... ....

**Question: What makes the large language model so powerful?**

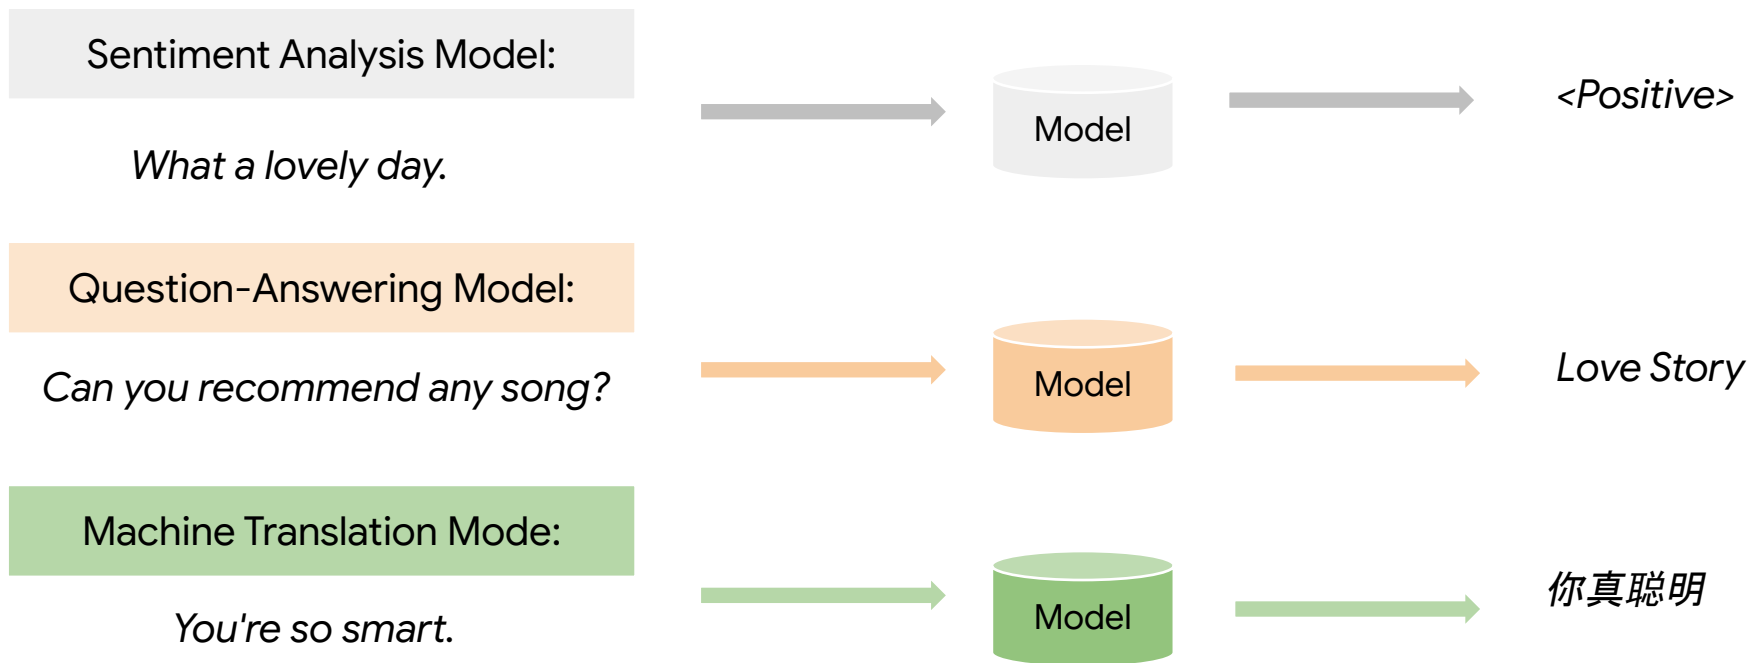

# What gives the robust capabilities of LLMs in handling a various of downstream tasks?

- Pretrained on an extensive corpus sourced from the vast expanses of the internet.
- fine-tunes models like GPT-3 and GPT-4 using human-labeled data

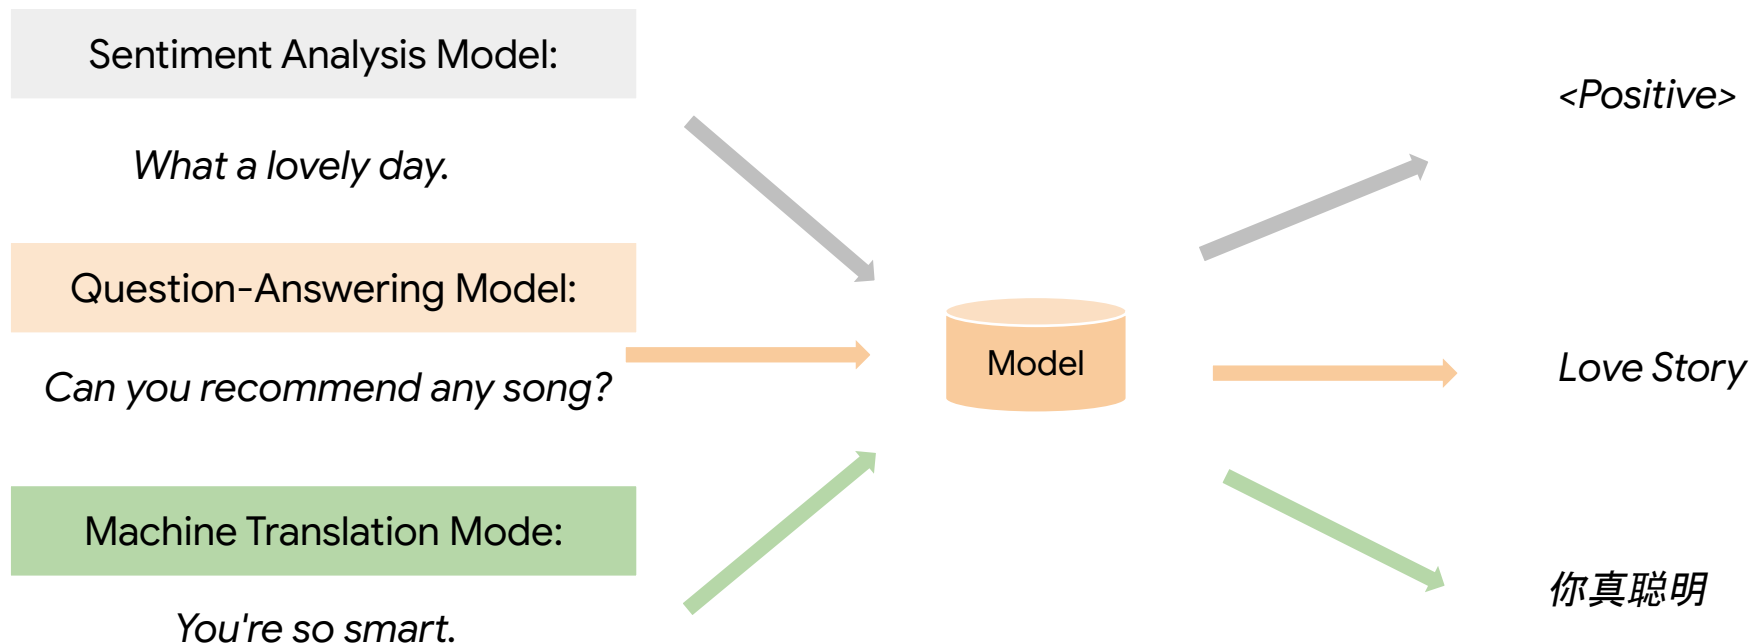

# One model, only one task

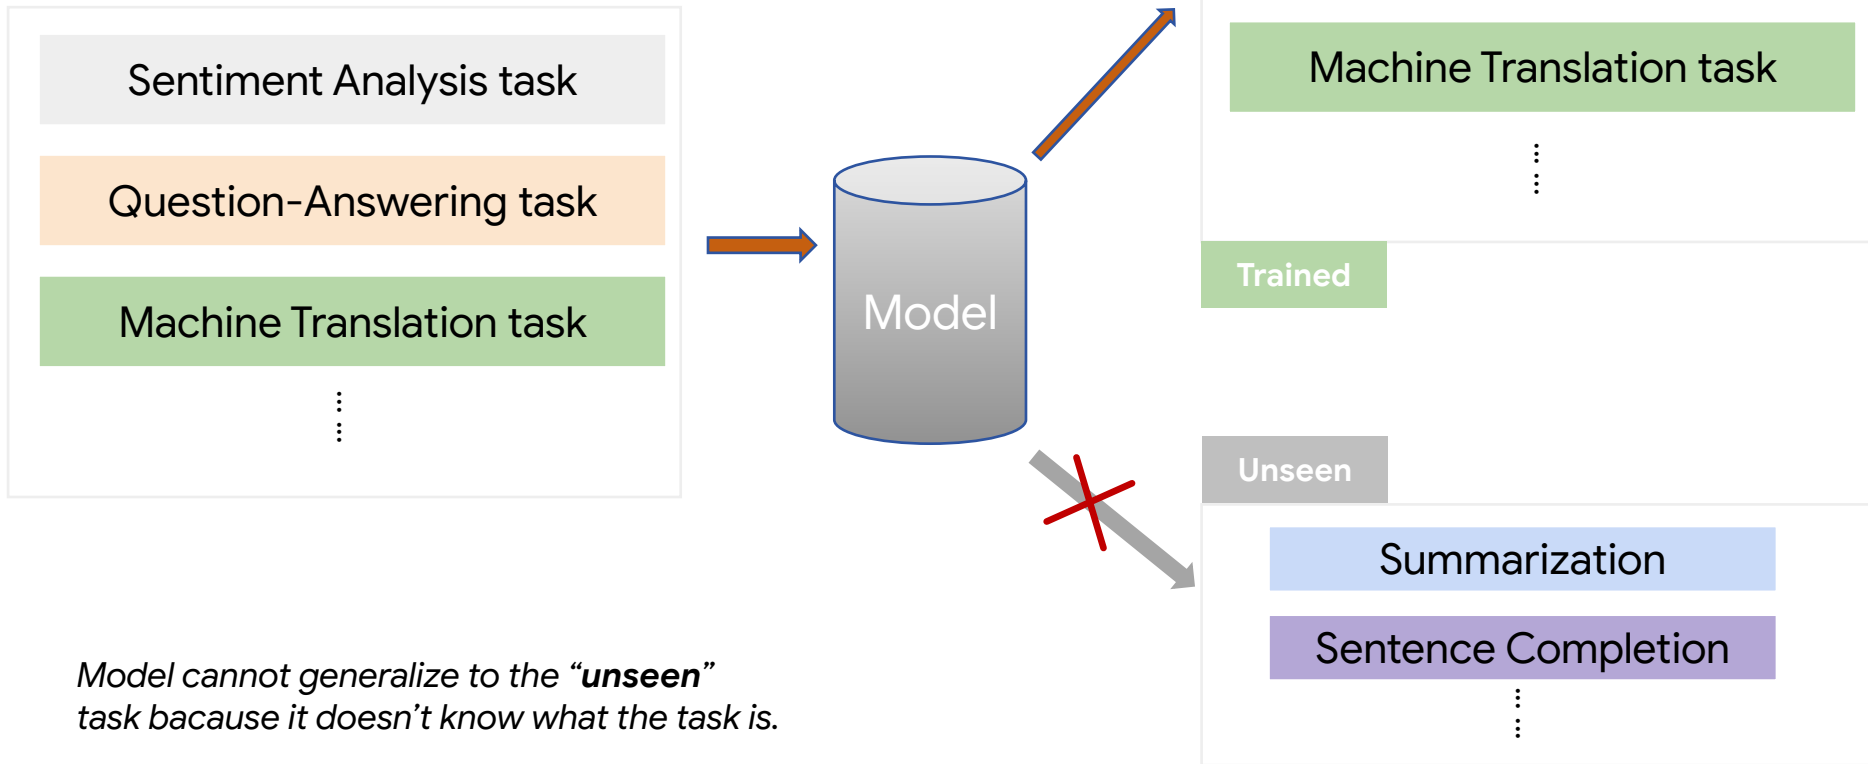

"Instance-level generalization within one task."

# One model, but many tasks:

# One model, but many tasks:

## Paper list:

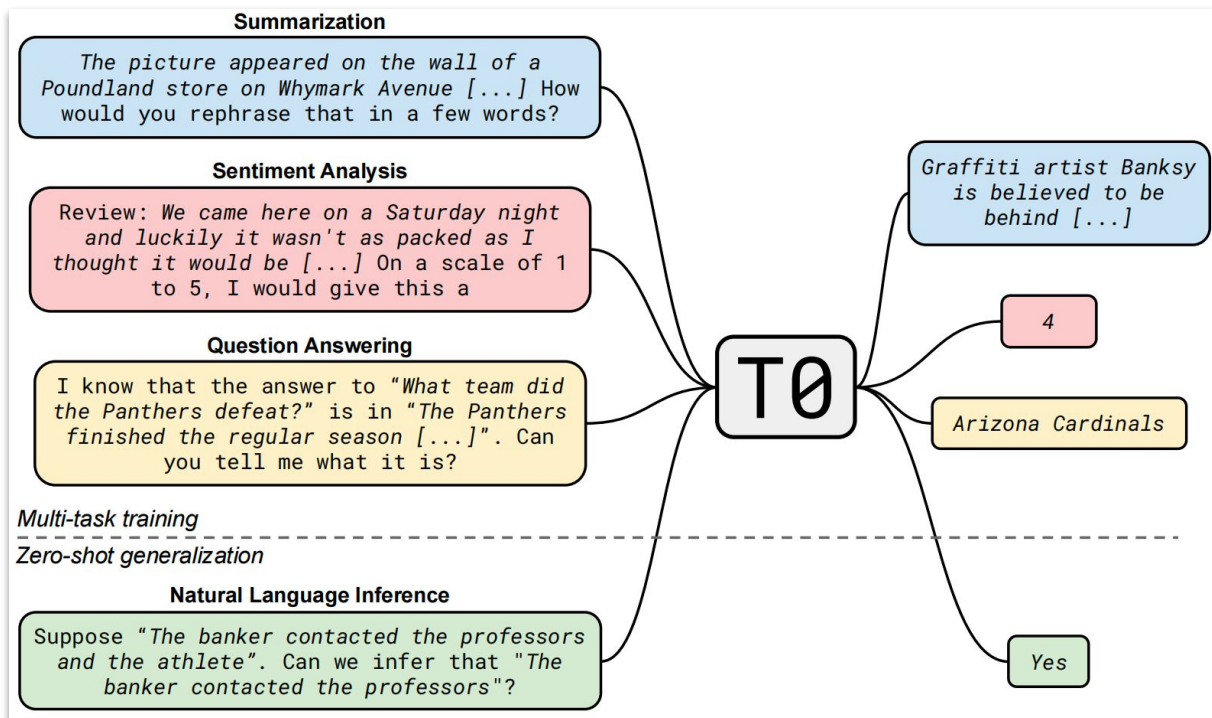

- Multitask Prompted Training Enables Zero-Shot Task Generalization
- SELF-INSTRUCT: Aligning Language Models with Self-Generated Instructions
- How Far Can Camels Go? Exploring the State of Instruction Tuning on Open Resources
- One Embedder, Any Task: Instruction-Finetuned Text Embeddings

# Paper 1: Multitask Prompted Training Enables Zero-Shot Task Generalization

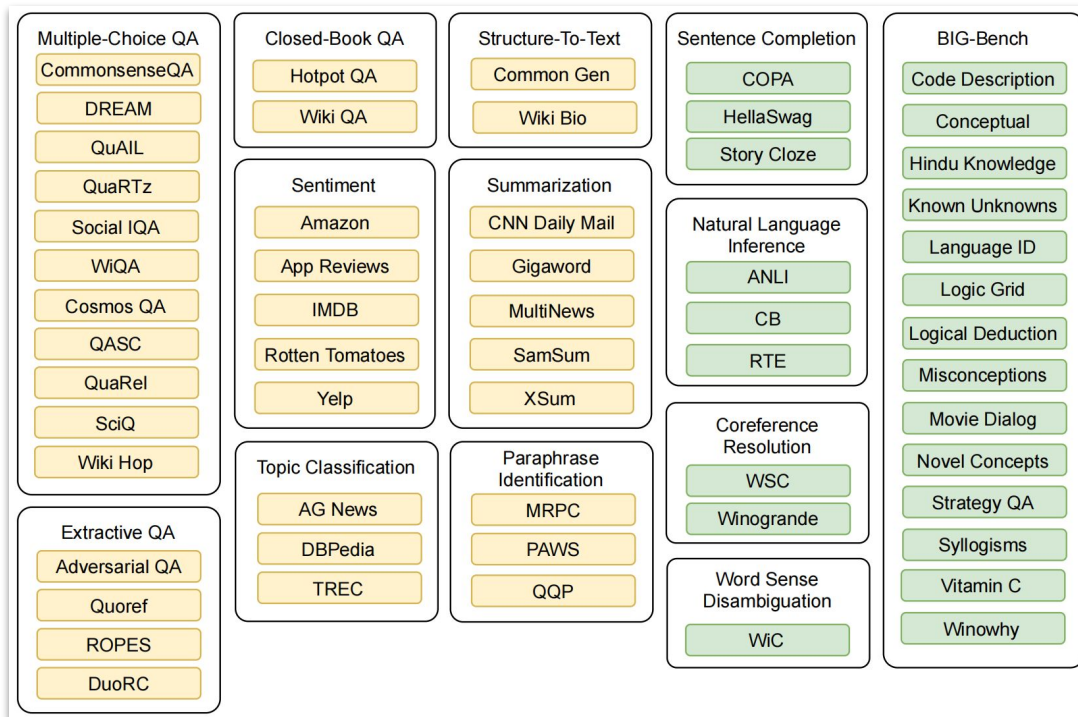

# T0, a model with zero-shot generalization ability.

- An encoder-decoder based model.
- T0 could provide reasonable answer in unseen task, like natural language inference in this picture.

# Experiment Setup

- T0 is trained on the **multitask** mixture detailed in Yellow tasks (8 tasks).
- Evaluate **zero-shot generalization** on the Green tasks

# Compare T0 with GPT3 and T5+LM

- T0 achieves a general good performance in **unseen tasks**

# Prompt Robustness

- More prompts leads to better performance
- Generally lower interquartile range

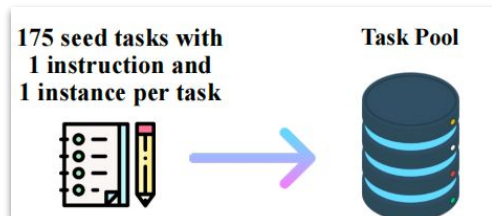

# Takeways

1. Instruction Learning could significantly **improve the performance of zero-shot task generalization**.
2. Adding **more number of prompts** will improve Zero-Shot generalization performance.
3. Thinking: In this era of prompting, perhaps more attention should be directed towards the efficient design of prompts, such as automating instruction discovery.

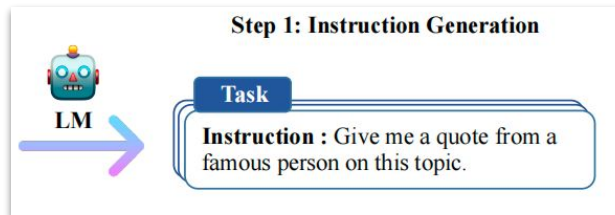

## Paper 2. SELF-INSTRUCT: Aligning Language Models with Self-Generated Instructions

# Pipeline of Instruction Generation

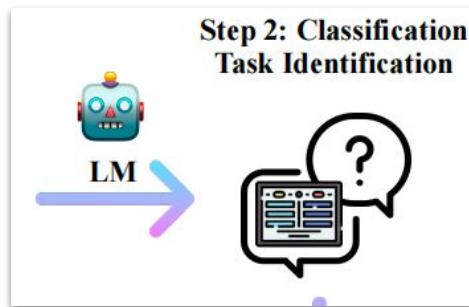

1. Manually design instructions. Put in the task pool.

2. Generate the instruction

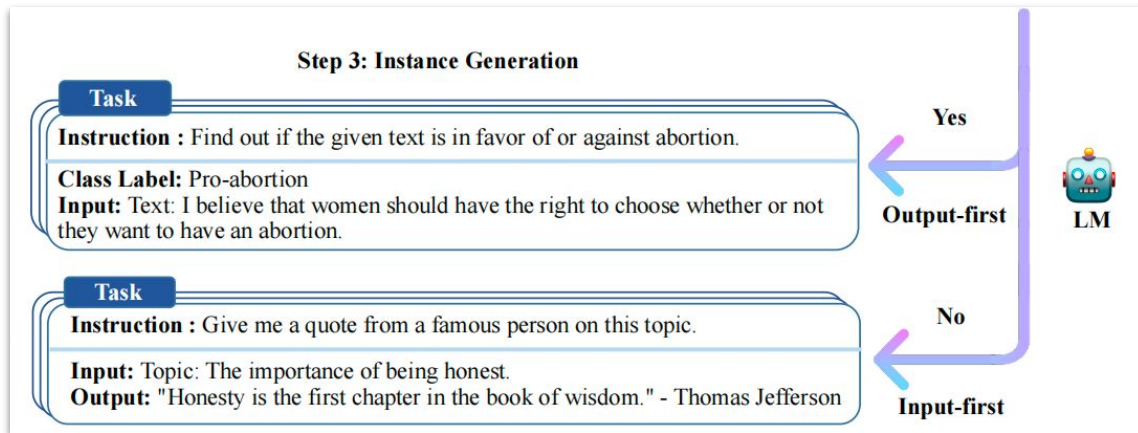

3. Manually design instructions. Put in the task pool.

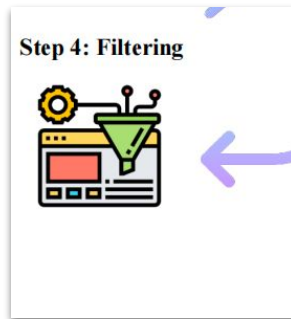

# Pipeline of Instruction Generation

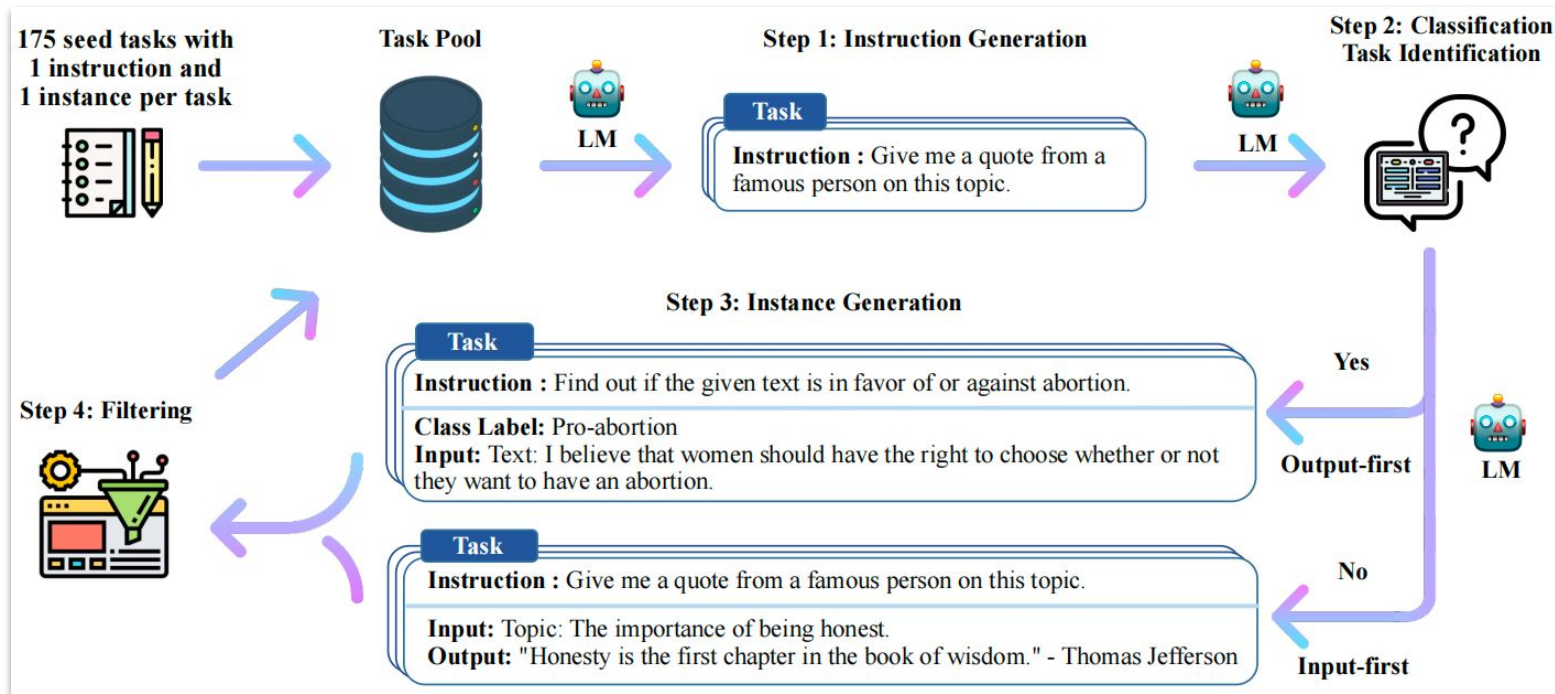

## 4. Instance Generation

## 5. Filtering

# Pipeline of Instruction Generation

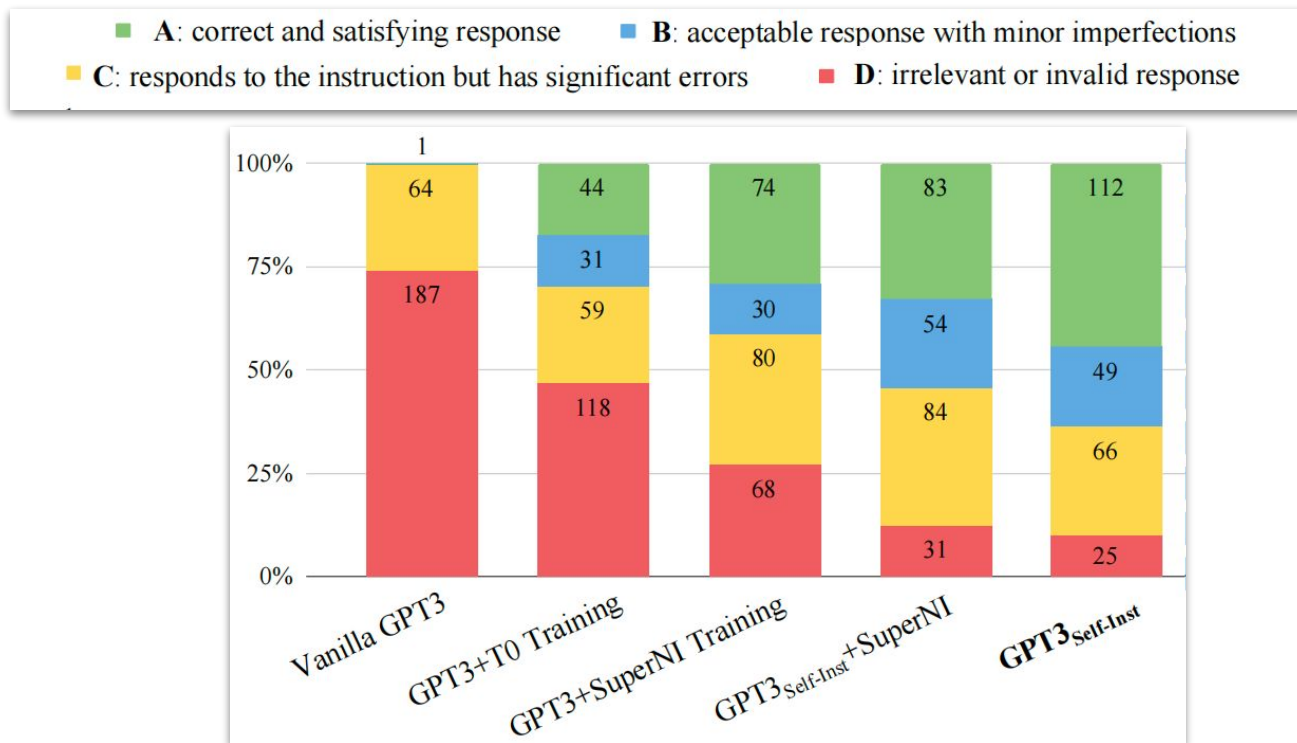

# Evaluation results on **unseen tasks** from SUPERNI

1. Self-instruct **boosts** GPT3 by 33.1%
2. **Nearly matches** the performance of InstructGPT.
3. Complementary **improvement** to the existing human-labeled training set.

	Model	# Params	ROUGE-L
	<b>Vanilla LMs</b>		
	T5-LM	11B	25.7
	GPT3	175B	6.8
	<b>Instruction-tuned w/o SUPERNI</b>		
①	T0	11B	33.1
	GPT3 + T0 Training	175B	37.9
②	GPT3 <sub>SELF-INST</sub> (Ours)	175B	39.9
	InstructGPT <sub>001</sub>	175B	<b>40.8</b>
	<b>Instruction-tuned w/ SUPERNI</b>		
	Tk-INSTRUCT	11B	46.0
③	GPT3 + SUPERNI Training	175B	49.5
	GPT3 <sub>SELF-INST</sub> + SUPERNI Training (Ours)	175B	<b>51.6</b>

# Evaluation based on Human Experts

# Impact of the **Quality** of Instructions

Improving the **instruction quality** (using instructGPT) can significantly boost the performance

# Takeways

- You **don't need a huge amount of labeled data** to get good initial instructionfollowing ability.
- LLMs themselves know many tasks/skills.
- One aspect of instruction tuning is to elicit these skills (i.e., alignment).
- Self-instruct is applicable to a broad range of LLMs, both vanilla and instruction-tuned.
- More broadly, humans & AI should collaborate in building datasets.

## Paper 3. How Far Can Camels Go? Exploring the State of Instruction Tuning on Open Resources

# Various Instruction Dataset

Table 1: Instruction datasets investigated in this work. CoT and FLAN V2 are sampled to 100K to match the sizes of other datasets. We report the average number of rounds ( $\bar{N}_{rounds}$ ), average length of prompts ( $\bar{L}_{prompt}$ ), average length of completion ( $\bar{L}_{completion}$ ).

Datasets	Sourced from	# Instances	$\bar{N}_{rounds}$	$\bar{L}_{prompt}$	$\bar{L}_{completion}$
SuperNI [42]	NLP datasets + Human-written Instructions	96,913	1.0	291.1	38.7
CoT [44]	NLP datasets + Human-written CoTs	100,000	1.0	266.0	53.2
Flan V2 [26]	NLP datasets + Human-written Instructions	100,000	1.0	355.7	31.2
Dolly [12]	Human-written from scratch	15,011	1.0	118.1	91.3
Open Assistant 1 [23]	Human-written from scratch	34,795	1.6	34.8	212.5
Self-instruct [41]	Generated w/ vanilla GPT3 LM	82,439	1.0	41.5	29.3
Unnatural Instructions [21]	Generated w/ Davinci-002	68,478	1.0	107.8	23.6
Alpaca [38]	Generated w/ Davinci-003	52,002	1.0	27.8	64.6
Code-Alpaca [6]	Generated w/ Davinci-003	20,022	1.0	35.6	67.8
GPT4-Alpaca [31]	Generated w/ Davinci-003 + GPT4	52,002	1.0	28.0	161.8
Baize [46]	Generated w/ ChatGPT	210,311	3.1	17.6	52.8
ShareGPT <sup>3</sup>	User prompts + outputs from various models	168,864	3.2	71.0	357.8

# Various Instruction Dataset

## An example, ShareGPT

- Collect from **users' interactions with GPT**
- Users' input prompts **contain instructions**
- A **fusion** of human-written data and GPT-generated data

`<|user|>`

Explain the fault-tolerance of the reaction control system on the Space Shuttle.

`<|assistant|>`

The reaction control system (RCS) on the Space Shuttle was designed to be fault-tolerant, meaning it was able to continue functioning even if one or more of its components failed. The RCS consisted of two sets of ... `</s>`

`<|user|>`

Did the RCS have any on-orbit failures?

`<|assistant|>`

There were several instances where the reaction control system (RCS) on the Space Shuttle experienced failures or malfunctions during on-orbit missions. These ... `</s>`

# Dataset Selection and Performance Analysis

Should we combine all the datasets or use a specific dataset that serves as a comprehensive source?

- **Not a single best** instruction tuning dataset across all tasks
- Achieve the best overall (average) performance when **combining all the data**

	MMLU (factuality)	GSM (reasoning)	BBH (reasoning)	TydiQA (multilinguality)	Codex-Eval (coding)	AlpacaFarm (open-ended)	Average
	EM (0-shot)	EM (8-shot, CoT)	EM (3-shot, CoT)	F1 (1-shot, GP)	P@10 (0-shot)	Win % vs Davinci-003

# Other Evaluation Metrics

Are there other evaluation metrics? (e.g, model-based evaluation or human-based evaluation)

## Model-based Evaluation

- Utilize a LLMs like GPT-4 to **determine which is better**
- Tuning with **ShareGPT** achieves the best results
- The model prefer the **long and diverse** answers

Training Dataset ↓	7B	13B	30B	65B

Table 6: Win-rate (%) of LLaMA models of varying sizes fine-tuned on the given dataset against Davinci-003 using AlpacaFarm [16].

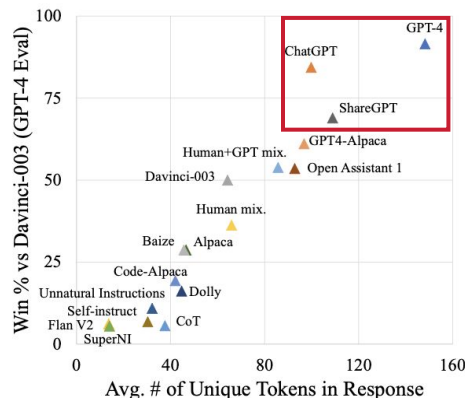

Figure 2: Win-rate scores of 13B models (trained on different datasets) given by GPT-4 strongly correlate with the average numbers of unique tokens in the model responses (Pearson  $r = 0.96$ ).

# Other Evaluation Metrics

Are there other evaluation metrics? (e.g, model-based evaluation or human-based evaluation)

## Human-based Evaluation

- **Consistent** with prior findings
- **Larger** models show greater improvements

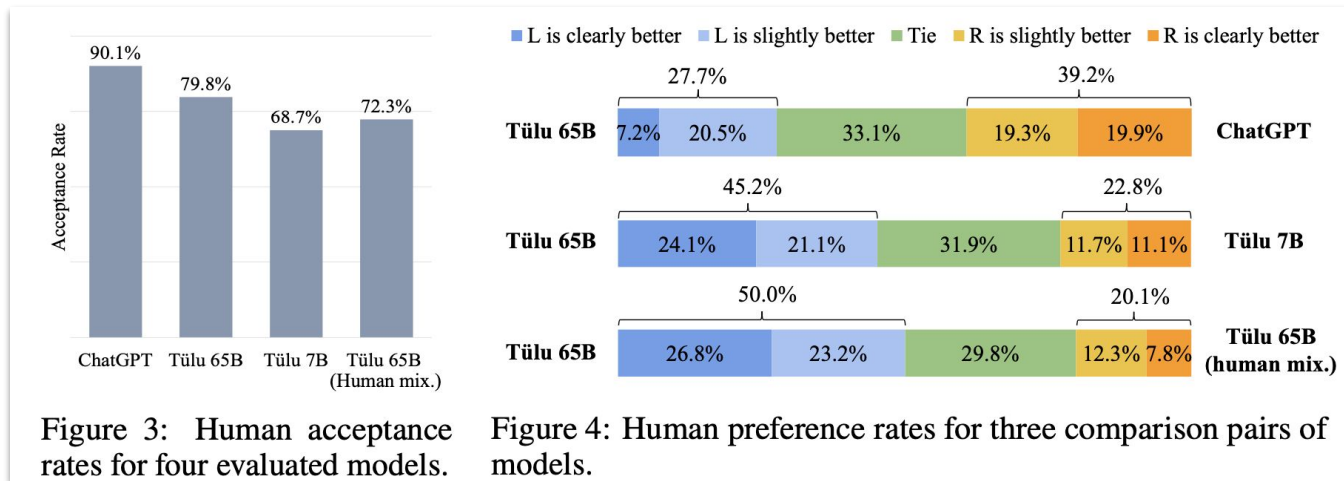

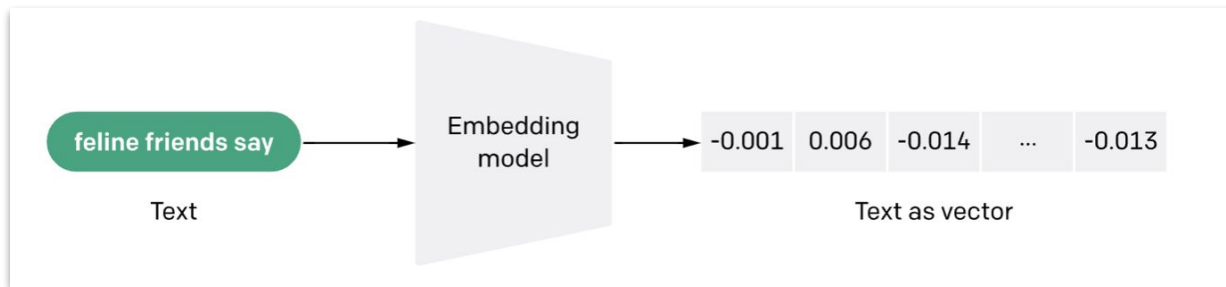

Figure 3: Human acceptance rates for four evaluated models.

Figure 4: Human preference rates for three comparison pairs of models.

## Paper 4. One Embedder, Any Task: Instruction-Finetuned Text Embeddings

# What is Text Embedding

Text embeddings are **numerical representations of concepts**

# Applications of Text Embedding

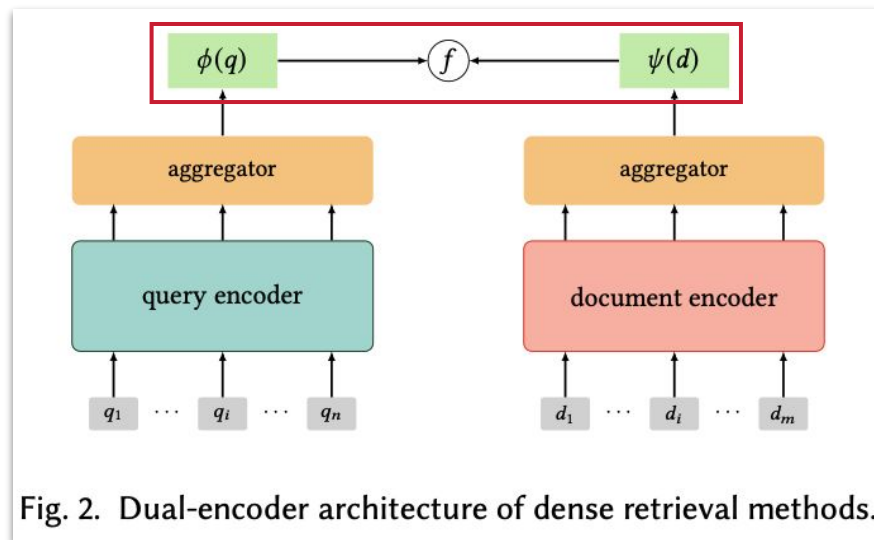

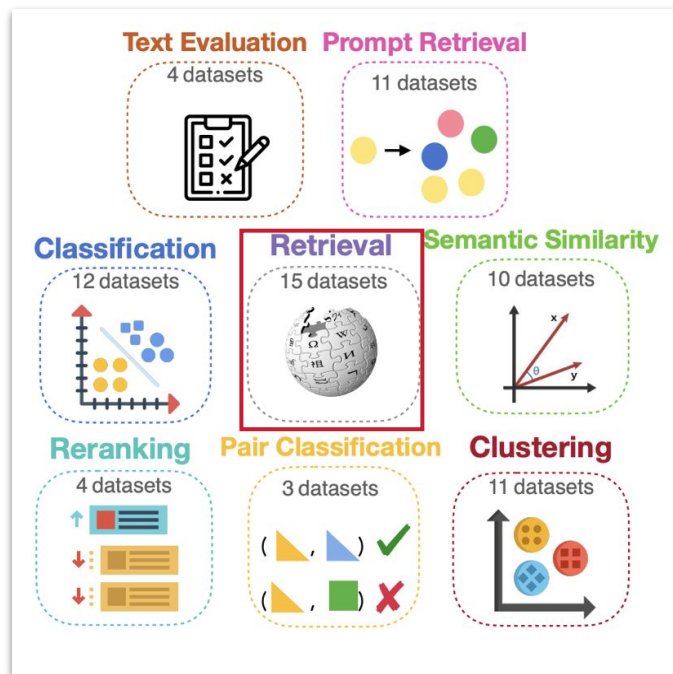

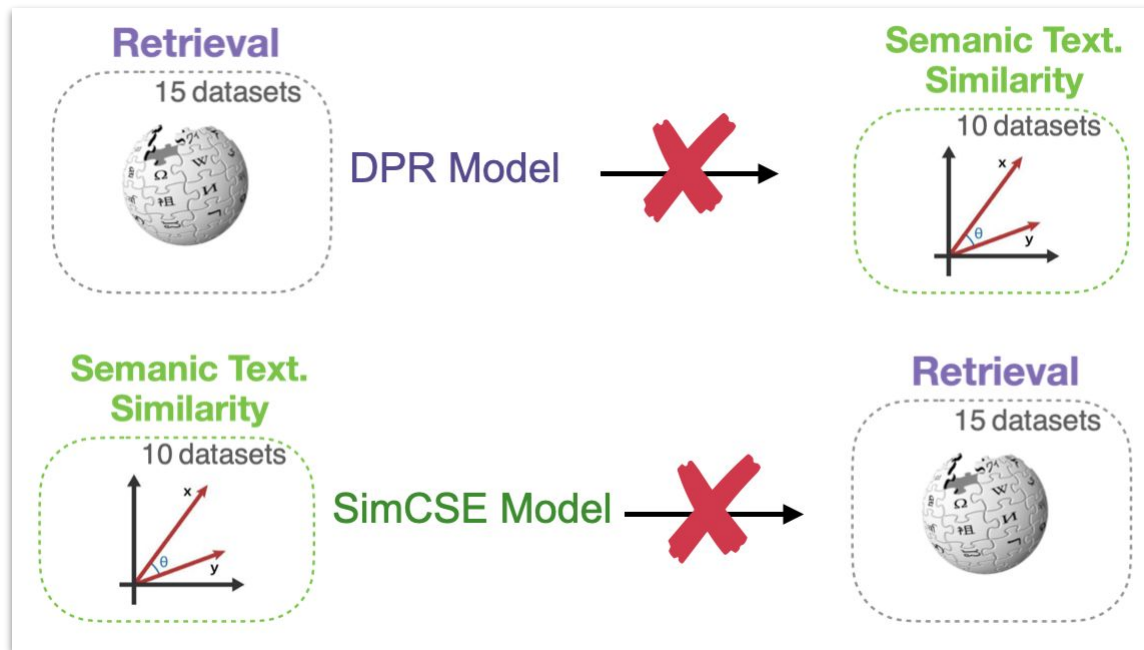

Fig. 2. Dual-encoder architecture of dense retrieval methods.

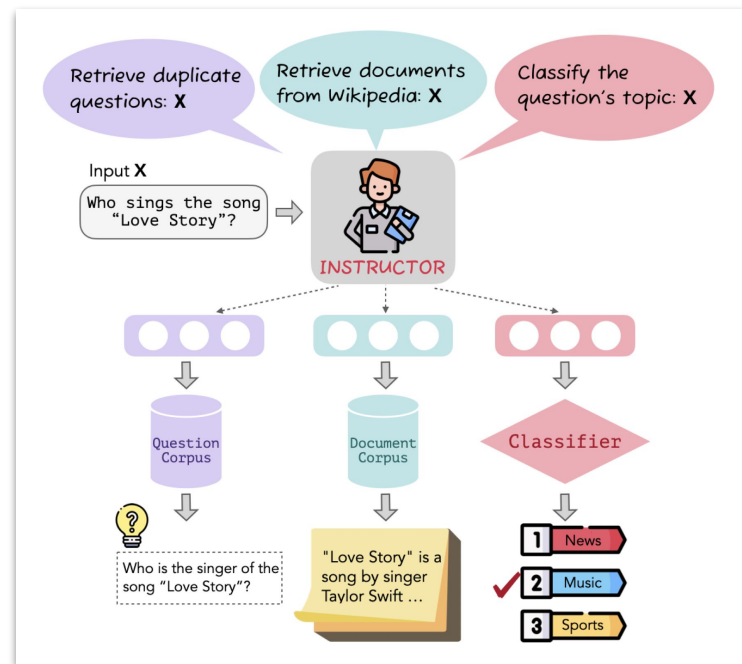

# Model Transferability Challenges

One Embedder trained with specific task can't be transferred to a new task

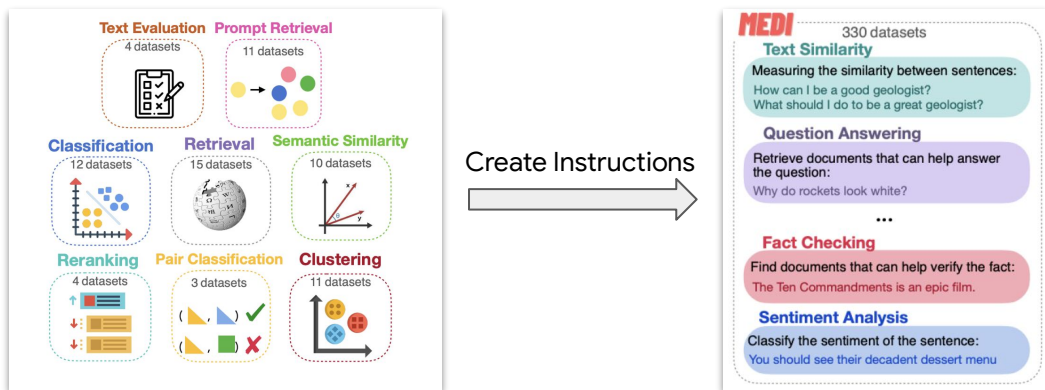

# Apply Instruction in Text Embedding!

Text embeddings adjusted to different downstream applications using **task** and **domain descriptions**

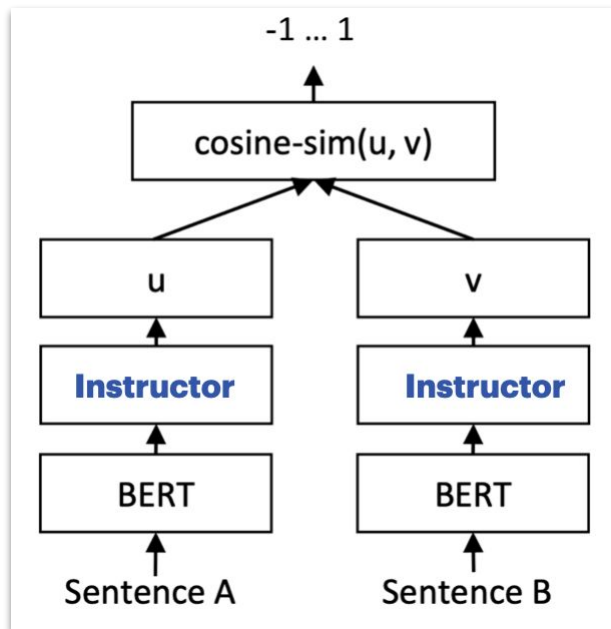

# MEDI: Multitask Embedding Data with Instructions

Task type	# of Datasets	Task	Instruction
Retrieval	15	Natural Question (BEIR)	<b>Query instruction:</b> Represent the Wikipedia question for retrieving supporting documents; <b>Doc instruction:</b> Represent the Wikipedia document for retrieval:
Reranking	4	MindSmallReranking	<b>Query instruction:</b> Represent the News query for retrieving articles; <b>Doc instruction:</b> Represent the News article for retrieval:
Clustering	11	MedrxivClusteringS2S	<b>Represent the Medicine statement for retrieval:</b>

# Architecture and Training Method

1. Create Pos/Neg Pairs

$$(x, I_x, y, I_y)$$

2. Calculate Similarity Score

$$s(x, y) = \cos(\mathbf{E}_I(I_x \oplus x), \mathbf{E}_I(I_y \oplus y))$$

3. Contrastive Training

$$\mathcal{L} = \frac{e^{s(x, y^+)/\gamma}}{\sum_{y \in \mathcal{B}} e^{s(x, y)/\gamma}},$$

# The Necessity of Instructions

Without instructions, the model **cannot be trained with the whole dataset.**

# Complexity of Instructions & Model Size

## Questions to Discuss

- Can we directly provide instructions to LLMs instead of tuning them?
- Have tasks outside of NLP utilized instruction tuning with LLMs to address problems?
- Are there other forms or approaches that can incorporate the idea of instruction tuning, similar to Instructor?

**Thank you.**
